

# Easier From Start to Finish

SIMPLIFIED IDENTIFICATION AND INSTALLATION

The power steering aftermarket has increased the focus on making repairs faster and easier for both the professional technician and DIY'ers. Many of our pumps now come with additional components already attached to make it easier - and in some cases safer - to make the repair. With Edelmann Elite® Pumps, we considered this at every level. That is why even our part numbers are considered in the process.

**Edelmann Elite** PART NUMBERS INCLUDE LETTER DESIGNATIONS TO VISUALLY REPRESENT THE INCLUSIONS OF ADDITIONAL COMPONENTS WITHOUT EVER HAVING TO SEE THE PHYSICAL PART.

**6030P**

Comes with the power steering **pulley**. No hassle to find, borrow or buy a pulley puller to remove the original pulley and install on the new replacement pump. No need to clean the old pulley, repair any nicks or damage that will cause premature belt failure . No need to check for excessive run-out or hoping the press fit is correct to prevent catastrophic damage. The process to replace a pulley if not performed correctly can cause internal damage to the pump and or steering system, why take a chance? An Edelmann Elite NEW power steering pump with pulley guarantees it's installed properly saving you valuable time repairing the vehicle.

THESE ADDITIONAL COMPONENTS, WHERE APPLICABLE, WILL SAVE VALUABLE TIME AND PROVIDE TROUBLE FREE INSTALLATION AND SERVICE BACKED BY THE BEST WARRANTY IN THE AFTERMARKET:

**100 years or 1,000,000 miles.**

**6053R**

Comes with **reservoir**. No need to remove, clean, inspect for damage, change the O-Ring or gasket and reuse on the new replacement pump. A NEW Edelmann Elite power steering pump with reservoir guarantees it's installed correctly, sealed properly and pressure tested to prevent leaking.

**6001X**

**Return tube** included. No need to remove, clean, inspect, change the O-Ring and install on the replacement pump. An Edelmann Elite NEW power steering pump with the return tube guarantees it's installed correctly, sealed properly and pressure tested to prevent leaking.

**6008U**

**Universal** pump without the pulley, pipe, or reservoir to cover multiple applications reducing inventory space. The "U" helps to identify if it's the right part for your particular needs.

**6005PR**

Comes with the **pulley and reservoir**. For some applications we provided multiple components to ensure that the install goes smoothly and prevents as many future failure modes as possible.
