## **HOSE READY™**

WE'RE HOSE READY...

**ARE YOU?**

When **properly replacing** a pump or a rack on a power steering system, It's vital to also **replace the hoses** and flush the system to **avoid premature failure**. Particles that caused the initial failure may still **remain in the fluid and hoses** if the job is left half done. These particles may cause the **new part to fail if not replaced**.

**Replacing the rack, pump, or gear just isn't enough.**

- **Flush the system**
- **Replace the hard part**
- **Replace the hoses**
- **Add a filter**

## **COMPLETE THE JOB**

Always include the proper hoses when ordering a hard part. The Hose Ready™ program makes it easy to obtain the correct hoses quickly, even if your parts supplier doesn't have them readily stocked.
